DETAILED ACTION

1. A request for continued examination (RCE) under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed 7/17/08 in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's amendment and remarks filed 2/05/08 have been entered.
2. Claims 15-20 are under examination.
3. In view of Applicant's amendment the previous rejection has been withdrawn.
4. The following are new grounds for rejection.
5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
6. Claims 15-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by U.S. Patent No. 5,595,881.

The '881 patent teaches a column device comprising a chamber and a solid support further comprising an MHC antigen:functional molecule complex(see, for example column 4, lines 39-52, MHC:anti-MHC antibody complex). Note that the columns used for affinity chromatography inherently meet the limitations of Claims 16-18. Further note that Claims 15 and 20 only limit the claims if the artificial antigen presenting cell option is chosen, however, the claims do not require said option be chosen, thus they still read on the MHC antigen:functional molecule complex.

The reference clearly anticipates the claimed invention.

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

8. Claims 15-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over Claims 1 and 7 of U.S. Patent No. 6,787,154. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claim and the claims of the '154 patent, which recites an artificial APC with a molecule for binding to a solid support, differ only in that the instant APC further comprises a generic immunostimulatory molecule and is bound to a solid support. Said minor differences would be obvious to the ordinarily skilled artisan and do not render the device of the instant claims patentably distinct. Note that the 2/14/02 restriction of parent application 09/421,506 included a group comprising an immunomodulatory column (Claim 215), however, said column comprised numerous additional limitations not recited in the instant claim, thus, the instant device

9. No claim is allowed.
